

PDFPlumber Test Suite

Text Hierarchy, Formatting & Bounding Boxes

This benchmark page intentionally combines multiple text sizes, font weights, paragraph blocks, columns, separators, and geometric objects. It is designed to exercise character extraction, word extraction, line grouping, font-size filtering, and spatial bounding-box analysis.

Feature Highlights

- Character and word extraction
- Bounding-box coordinates
- Font-size and style filtering
- Column-aware spatial cropping

System Requirements

- Python 3.x runtime
- ReportLab-generated PDF
- pdfplumber-compatible objects
- Text, vector, and raster content

Fine-print disclaimer: This 6pt text is intentionally small for font-size filtering and extraction tests.

Tables & Embedded Raster Image

Component	Specification	Status	Score
CPU	8-core processing unit 3.6 GHz nominal	PASS	98
Memory	16 GB DDR5 4800 MT/s	PASS	95
Storage	1 TB NVMe SSD PCIe 4.0 interface	PASS	97

Borderless Table

Whitespace-aligned columns; no grid lines.

SKU Code	Product Name	Price
SKU-1001	Precision Laptop	\$1,299.00
SKU-1002	Studio Monitor	\$349.00
SKU-1003	Wireless Dock	\$179.00

Embedded Raster Image

200 x 200 RGB test image for image object extraction.

Image includes gradients, rectangle, circle, and diagonal line.

Complex Layout & Metadata Stress Test

Benchmark Callout

- **Extraction:** Verify words, characters, and bounding boxes.
- **Layout:** Check spatial ordering across mixed content zones.
- **Filtering:** Test bold keywords, bullet glyphs, and rotated text.
- **Geometry:** Inspect nearby vector and text coordinates.

SAMPLE / TEST

Order / Specification Record

Order ID:	TEST-2026-0001
Date:	2026-09-14
Customer:	Benchmark Customer
Total:	\$1,827.00

Metadata stress: title, author, subject, creator, page count, font variants, rotation, vector paths, and raster image.
Targets: words, chars, lines, rects, curves, images, cropping, tables, and layout-aware filtering.
